

Memorandum

To: Board of Managers
Buffalo-Red River Watershed District

From: Bennett Uhler, PE
Houston Engineering, Inc.

Subject: Stony Creek Restoration Project
Water Management District
Charge Determination

Date: June 28, 2023

Project: 1915-0220

INTRODUCTION

The provisions for the collection of charges under MS 103D.729 gives a Watershed District, through the amendment of its plan or during an update to the Comprehensive Watershed Management Plan (CWMP), the authority to establish one or more Water Management Districts (WMD) for the purpose of collecting revenues and paying the costs of projects initiated under sections 103B.231, 103D.601, 103D.605, 103D.611, or 103D.730. The establishment of a WMD requires the description of the methods used to determine the charges. These methods were generally described within the Buffalo-Red River Watershed Comprehensive Watershed Management Plan (BRRW CWMP, finalized on October 28, 2020). The methods for the proposed Stony Creek Water Management District (Stony Creek) are further described and the charges determined using these methods by this Memorandum. A general philosophy for funding project discussion believed to be consistent with the policies established within the BRRW CWMP is also presented.

THE PROJECT

The current project for which a WMD is being considered is the Stony Creek Restoration Project. The project involves several miles of Stony Creek channel restoration and streambank stabilization, which would result in the construction of a two-stage channel with expanded vegetative buffers, set-back levees, side water inlets, grade control structures, and other sediment control BMPs along the length of the stream. The project also includes a potential impoundment site as well as future stream restoration along Stony Creek downstream of 120th Ave S. In addition, features of the WMD include operation and maintenance of the following storage detention sites; Spring Creek Detention (Section 25, Elkton Township), Stony Creek Detention (Section 12, Humboldt Township), and Hay Creek Detention (Section 9, Skree Township). The BRRWD has applied for and received permits from the US Army Corps of Engineers (USACE) for this work. The BRRWD also coordinated with the Minnesota Department of Natural Resources, who determined no Public Waters Work Permit would be needed. The BRRWD has completed the Environmental Assessment Worksheet (EAW) process with a Record

of Decision, dated July November 23, 2020, that an Environmental Impact Statement (EIS) is not needed for the project.

OPINION OF PROBABLE CONSTRUCTION COST

The Opinion of Probable Cost for the project (referred to as the “project estimated cost”) is \$2.76 Million. This includes \$660,000 for 167 acres of new permanently protected conservation along Stony Creek. The Opinion of Probable Cost associated with work along the channel restoration corridor, estimated by the District Engineer, is \$2.10 million. It is anticipated that more than 70 percent of the overall project cost will come from federal, state, and other outside funding sources. Local funding is anticipated to come in part from a Water Management District.

WMD BACKGROUND

The BRRWD, through their CWMP, has the authority to establish one or more Water Management Districts for the purpose of collecting revenues and paying the costs of projects initiated under sections 103D.601, 103D.605, 103D.611, or 103D.730. To use this funding method, Minnesota law (MS 103D.729) requires that the area to be included in the WMD be described, the amount to be charged identified, the methods used to determine the charges described, and the length of time the WMD is expected to remain in force specified. Stony Creek is within the Central Planning Region, as described in the BRRW CWMP. The WMD may be dissolved by the procedures prescribed for the establishment of the Water Management District. Based on the BRRW CWMP, the maximum WMD revenue limit within each WMD is based on 0.10% of the taxable market value within each planning region. For the Stony Creek watershed, within the Central Planning Region, this equates to a value of approximately \$430,000. To help keep the local cost down on a year-by-year basis, an assessment value of \$135,000 per year has been chosen. **Figure 6** shows a breakdown of the proposed annual charge per acre within the Stony Creek watershed of the Central Planning Region. Based on the proposed per acre charge, \$135,000 could be raised annually from the Stony Creek portion of the Central Planning. This value of \$135,000 has been used for the purposes of computing the estimated WMD charges.

PROJECT FUNDING APPROACH

The BRRWD has been looking at a variety of funding sources to pay for the Stony Creek Restoration Project. Applications for various grant funds to defray the local cost of this project have been submitted and the BRRWD will continue to look at ways to bring funds into the project from non-local sources. The BRRWD has been working with the MN DNR on two funding fronts. The BRRWD was awarded a grant of \$320,000 from the MN DNR Flood Hazard Mitigation Grant program that can be used to acquire land rights (easements or purchase) along the restoration corridor. That grant requires a 50% match, so a \$320,000 local match will need to be contributed from locally raised funding. The other funding received from DNR for the project is from the Outdoor Heritage Fund. Current funding received is at \$1.6 million. The BRRWD is working with the DNR to increase that grant amount at the present time. To get that funding, the BRRWD applied to the DNR to be on their Stream Restoration Priority list. The BRRWD also has funding they can tap into through the Watershed Based Implementation Funding grant program through the MN Board of Water and Soil Resources (BWSR). The BRRWD will continue to identify additional outside funding opportunities. The WMD envisioned for this project is looked at as a supplemental stream of funding to match outside funding brought in through grant funds and other programs (such as EQIP, CREP, RIM, WRE, etc.) The exact funding package is not fully known at this time. It is also anticipated that the BRRWD will provide funding through funds raised District-wide through a MN

Statutes 103D.905 Subd. 3 levy. **Table 1 and Table 2**, shown below, summarize project costs and the current potential funding assumptions. Additional funding would be pursued by the BRRWD for construction of the impoundment site.

Table 1: Stony Creek Restoration Project – Opinion of Probable Cost

Portion of Work	Estimated Cost	Comments
Corridor restoration of Stony Creek	\$2,100,000	Based on Engineers Report
Easement acquisition	\$660,000	Based on Engineers Report
Total Estimated Cost	\$2,760,000	

Table 2: Stony Creek Restoration Project – Potential Funding Options

Funding Source	Estimated Amount	Comments
DNR Flood Hazard Mitigation Grant	\$320,000	Easements
DNR Stream Habitat Program (LSOHC-OHF)	\$1,600,000	BRRWD working with DNR to increase funding amount
Water Management District	\$570,000	Estimated at 20% of the stream corridor work
BRRWD 103D.905 Subd. 3	\$270,000	Estimated at 10% of the stream corridor work
Total Estimated Funding	\$2,760,000	

DETERMINING THE WMD BOUNDARY

The drainage area of the project is located within the Central Planning Region of the BRRWD. The total calculated area within the project boundary is approximately 81,130 acres. Only the portion of the Central Planning Region that drains to Stony Creek has been included in the proposed WMD. When the planning region hydrologic boundary crossed a parcel, that portion of the parcel within the hydrologic boundary was included in the WMD. Through discussions with BWSR, the BRRWD will limit the WMD to the portion of the Central Planning Region that contributes runoff to Stony Creek. In total, this includes about 77,571 acres. Portions of the Central Planning Region that do not contribute runoff to Stony Creek will not be assessed charges, and in turn will not be allowed to apply for project funds through the WMD. The lands shown in **Figure 1** are those within the Central Planning Region and the proposed Stony Creek WMD, except for areas that may be removed for non-contributing reasons.

SUMMARY OF CHARGE DETERMINATION

The BRRW CWMP laid out four general methods to determine charges for the Water Management District. The methods proposed to establish the charges will be based upon the proportion of the runoff volume contributed by a parcel or may be based on the drainage area of the parcel, within the Water Management District. What is described below is a refinement to the methodology listed in the BRRW CWMP due to limitations of the available geospatial data.

MODIFIED RUNOFF METHOD

This method establishes rates based on a modified runoff method. The runoff method uses SSURGO Soils and Land use data (2019 National Agricultural Statistics and Service) to calculate a curve number related to the percentage of runoff estimated from a rainfall event (10-year, 24-hour). Preliminary review of the 2019 National Agricultural Statistics and Service (NASS) showed several discrepancies with actual landuse data, based on more recent aerial photography and the use of other available tools. Existing riparian corridors were identified and replaced within the NASS data. Lands enrolled in conservation related programs were identified and assigned the landuse of grassland. The National Wetland Inventory (NWI) and the National Hydrography Dataset (NHD) also proved to be more accurate than the NASS data, so this information was used to determine wetlands and waters within the project boundary. Parcels that are inside of corporate limits were considered city lots and assigned the landuse of medium density development. Farmstead parcels that were not already split into separate areas were adjusted from agricultural landuse to low density development. Existing road right-of-way data for Clay County was used. Most of the existing right-of-way was present within the parcels; however, parcels that did not include road right-of-way were assumed to be 33 feet on either side of the road centerline. Road right-of-way areas are exempt from this analysis. The existing landuse was identified as nine categories: 1. Open Water, 2. Developed, Open Space, 3. Developed, Low Density (Farmsteads), 4. Developed, Medium Density (City Lots), 5. Mixed Forest, 6. Grassland/Herbaceous, 7. Cultivated Crops, 8. Woody Wetlands, and 9. Emergent Herbaceous Wetlands. **Figure 1** shows the landuse types and areas identified within the project boundary, as described above. **Table 3** shows the curve number based on soil type and landuse. The SSURGO Hydrologic Soil Group data within the project area was used to determine the SCS Curve Number (CN) for runoff. For soils that had a dual classification rating (A/D, B/D, and C/D), a weighted average between the drained and undrained condition was used. Wetlands and waters were exempt from this average and the same value was used under all conditions. **Figure 2** summarizes the SSURGO soils map and **Figure 3** summarizes the CN values throughout the project area.

Table 3: Pervious CN by Hydrologic Soil Group

Land Cover Code	Pervious CN by Hydrologic Soil Group						
	A	B	C	D	A/D	B/D	C/D
Open Water	100	100	100	100	100	100	100
Developed, Open Space	45	65	76	82	63	73	79
Developed, Low Density (Farmsteads)	60	71	82	86	73	80	84
Developed, Medium Density (City Lots)	77	85	90	92	85	88	91
Mixed Forest	30	55	70	77	54	66	74
Grassland/Herbaceous	30	58	71	78	54	68	75
Cultivated Crops	61	71	78	81	71	76	80
Woody Wetlands	78	78	78	78	78	78	78
Emergent Herbaceous Wetland	85	85	85	85	85	85	85

RUNOFF CHANGES

The runoff values for the project area were calibrated by comparing the runoff results from a 10-year, 24-hour rainfall event (3.70 inches) for pre-settlement and existing conditions. Pre-settlement conditions used a landuse

of grassland/herbaceous across the entire area outside of existing wetlands and open water, while existing conditions used the landuse as exists today. An average CN for each landuse was calculated in each area to normalize the data and reduce large fluctuations in assessment values between individual parcels within a given area. The difference in runoff values were summed and each parcel was assigned its relative percent of the total project area, by landuse. **Figure 4** shows the change in runoff conditions throughout the project area.

CONTRIBUTION AREA

Not all the land within the project area contributes runoff and sediment during a 10-year, 24-hour rainfall event. In fact, there are some areas that do not contribute during a 100-year, 24-hour event. **Figure 5** summarizes the non-contributing areas within the project boundary, based on specific rainfall events. To account for areas with reduced contribution, or no contribution at all, a multiplier was used based on the event frequency. The total change in runoff and sediment load was adjusted based on this multiplier, as shown in **Table 4**.

Table 4: Runoff and Sediment Adjustment Multiplier

Rainfall Event (24 Hour Storm)	Multiplier	Area (Acres)
Less than 10 Year	1	74,889
10-25 Year	0.4	1,549
25-50 Year	0.2	934
50-100 Year	0.1	199
100 Year or Greater	0	3,559
Total Area – Contributing (Less than 100-year, 24-hour event)		77,571
Total Area – Non-Contributing (Greater than 100-year, 24-hour event)		3,559
Total Area (Combined)		81,130

WMD ANNUAL CHARGE PER ACRE

To calculate the annual charge per acre, the annual project Water Management District charge estimate of \$135,000 was multiplied by the percent runoff change and total sediment change for each parcel, then adjusted to the frequency of the multiplier shown in **Table 4**. All agricultural land was assigned the same cost per acre assessment. Parcels located within City limits were charged a minimum of \$1 per year, and parcels with a charge less than \$1 per year were rounded up to \$1 per year, to simplify billing. All parcel charges above \$1 per year were assigned their calculated value. Following the methods previously described, the exact charge estimate equals \$135,000. **Figure 6** summarizes the charges per acre/per year on a parcel basis based on the annual WMD charge estimate of \$135,000. The total annual charges per parcel are summarized as found in the tables in **Exhibit A**.

THE WATER MANAGEMENT DISTRICT DURATION

The BRRWD anticipates the Water Management District will provide funding to assist with the implementation of the Stony Creek Restoration Project. The Water Management District will remain in existence in perpetuity (or a shorter duration, should the Board decide to limit the duration). Annual assessment of charges could vary from no charges up to the maximum WMD revenue limit of the planning region.

The primary use of the funds collected from charges within the Water Management District will support stormwater runoff and water quality projects that help achieve the goals of the planning regions which benefit residents within the Central Planning Region Water Management District. This Water Management District will be specific to the establishment and maintenance of the Stony Creek Restoration Project.

THE WATER MANAGEMENT DISTRICT PROCESS

Draft guidance as to the process of creating a WMD has been provided by BWSR. The process involves eight steps. The first two steps are addressed through the revision of the Watershed Management Plan. The remaining steps 3 through 8 must be completed prior to any collection of charges in any WMD. This memo provides the guidance for Steps 3 and 4. The remaining steps 5 through 8 still need to be completed.

Step 1. Amend Watershed District Plan to create a water management district.

Amendment must include:

- Description of area to be in the water management district
- The amount to be raised by charges (total amount is necessary if fixed time for water management district to be in force, otherwise annual maximum (cap) amount)
- The method that will be used to determine the charges
- The length of time the water management district will be in force (perpetuity is acceptable)

Step 2. Approval of Plan amendment under M.S. § 103D.411 or as part of a revised Plan under M.S. § 103D.405.

- Revised Plan, or petition and amendment, sent to BWSR
- BWSR gives legal notice, and holds hearing if requested
- BWSR orders approval or prescribes plan or amendment
- BWSR notifies WD managers, counties, cities, SWCDs

Step 3. Watershed District refines methodology for computing charges.

Step 4. Watershed District determines and sets charges for all properties within the water management district after identifying scope of project and deciding method(s) of funding project.

Step 5. Watershed District develops collection mechanism.

- Request County or Counties to collect, or Billing and collection by Watershed District

Step 6. Watershed District holds hearing, orders the establishment (implementation) of a project in the water management district, and initiates stormwater utility charges.

- Projects implemented must be ordered by the managers
- Order for project must specify funding method(s)
- Watershed District must notify counties, cities, and towns within the affected area at least 10 days prior to a hearing or decision on projects implemented under this section of statute

Step 7. Watershed District establishes a separate fund for proceeds collected from the stormwater utility charges.

Step 8. Resolution of Disputes. Local governments may request BWSR to resolve disputes pursuant to M.S. § 103B.101, Subd. 10.

NEXT STEPS AND RECOMMENDATIONS

The recommended charges for the Central Planning Region would be the modified combined method as described above based on the simplicity of the methodology, the limitations of the coarse nature of the existing land use raster data, and charge variance for landowners based on contributing area during specific rainfall events.

We recommend the Board adopt the proposed charge as described in this memo.

The project needs to be established as a Watershed District project in accordance with MN Statutes 103D and the water management district needs to be established as outlined above and as established by BWSR.
